Dye-ing the clear 10/22 mags

How is this done? I have heard that some people use that Rit clothing dye, but I can't recall the specifics. Wanted to get a couple of clear mags and dye them different colors so I could load them with different ammo types and remember what's in them :bthumb:

Its really very simple. Just disassemble the magazine, follow the directions on the Rit Dye, and whamo...you have a different colored mag.

APEXDUCK

Ones that look like this?

Take a 2 quart pot with about 1 to 1 1/2 qtrs of water and bring it just to a boil.
Add one table spoons of RIT dye and one table spoon of salt.
Remove pot from heat and add your disassembled plastic parts.

Takes about 4-5 minute for color to soak in. Check progress as you go. Long time equals darker color. Rinse parts with water and dry the part if they are not as dark as you want.

FYI, this dye will add color to a white sink. Be sure your wife is not home and that you have bleach on hand to clean up the mess. :)

Just out of curiosity, how well does the dye hold up to normal cleaning and exposure to oils?

Very well, Ive dyed tons of stuff from handgun grips to paintball parts back in the day, once its in there, its for good.
